

Task1:

Step 1: One day's forecast.

Here's an example JSON response for one day's weather forecast. *Note that unlike the files in the previous lecture, there is no "top level" object with one key and one value. There is only one level, so no need for indentation.*

```
{
  "date": "2015-09-01",
  "description": "sunny",
  "maxTemp": 22,
  "minTemp": 20,
  "windSpeed": 12,
  "danger": false
}
```

Answer1:

Represents the weather forecast for one day.

Element	Description	Type	Notes
Date	The date of the forecast	string	Date format is YYYY-MM-DD
Description	Text description of the weather	string	values: "sunny", "cold", etc.
maxTemp	The highest possible temperature that day	number	In degrees Celsius
minTemp	The lowest possible temperature that day	number	In degrees Celsius
windSpeed	The wind speed	number	km/h
danger	True is the weather conditions are dangerous: otherwise, false	Boolean
